# Electronic Enterprise: Strategy and Architecture

## Table of Contents

Preface .................................................................................................................. xi

## Part I: Enterprise Evolution

### Chapter I. The New Informed Business Architecture ......................... 1

- Introduction ................................................................................................. 1  
- Shift of Power ............................................................................................. 2  
  - The Political Perspective ......................................................................... 2  
  - The Economic Perspective ...................................................................... 2  
  - The Social Perspective ........................................................................... 4  
- Shift in Strategic Resources ...................................................................... 6  
- Shift of the Enterprise Structure .............................................................. 7  
- Shift of Management Control .................................................................. 12  
  - From the Hierarchical to the Networking Model .................................. 12  
  - Business Innovation .............................................................................. 13  
  - The Campus Model ............................................................................... 14  
  - From Tasks to Culture Control .............................................................. 16  
- Shifts of Infrastructure ............................................................................. 16  
  - From Formative to Informative Products and Economy .................... 16  
  - From Automation Islands to Federated Systems  
    - Architecture ....................................................................................... 17  
  - From National and Traditional to Cross-Culture and  
    - Electronic Communications ............................................................... 18  
  - From the Known to Unknown and the Dot.Com Crisis ...................... 19  
  - September 11, 2001 ............................................................................ 19  
- New Rules of Post-Modern Business ....................................................... 20  
- Conclusion .................................................................................................. 21  
- Bibliography ............................................................................................... 22

### Chapter II. Enterprise Configurations ..................................................... 25

- Introduction ............................................................................................... 25  
- Enterprise Classification .......................................................................... 26  
- Off-Line Enterprise .................................................................................. 28
Part II: Enterprise Information Infrastructure

Chapter III. Enterprise Information Infrastructure (EII) .......... 70
  Strategy and Rationale ........................................... 70
  EII General Architecture .......................................... 72
  Telecommunications Layer ......................................... 76
  Computer Networks Layer .......................................... 78
    LAN ................................................................. 78
    MAN ................................................................. 80
    WAN and VAN ..................................................... 81
    GAN and VAN ..................................................... 83
  Internet Layer ..................................................... 85
    Internet .......................................................... 85
    Intranet .......................................................... 93
    Extranet .......................................................... 93
  Computing Layer ................................................... 97
  Communications Layer .............................................. 99
    PBX ................................................................. 99
    Voice Mail ........................................................ 100
    E-mail ............................................................. 100
    E-meeting ........................................................ 101
    Computer Conferencing ......................................... 101
    Bulletin Board Systems (BBS) .................................... 102
    Groupware ......................................................... 103
    Work Flow Systems (WFS) ........................................ 104
    Teleconferencing ................................................ 104
    Telecommuting ................................................... 105
    Fax ................................................................. 106
    EDI ................................................................. 106
    EFTS ............................................................... 107
Part III: The Internet Ecosystem

Chapter VI. The Internet Applications and Business ...................................... 250

The Internet Economy ................................................................. 250
Internet Usage ................................................................. 250
Economic Impact ................................................................. 251

The Internet Ecosystem ............................................................. 253

E-Commerce ........................................................................... 256
E-Commerce Applications ...................................................... 257
E-Commerce Business Models ................................................. 258
E-Commerce Architecture ...................................................... 260
Electronic Payment Systems .................................................. 266
E-Commerce Security .............................................................. 268
Good-Bye to Fixed Pricing ......................................................... 269

E-Business ............................................................................... 274
“Dot-Com” Companies .......................................................... 280
Rethinking the Internet ........................................................... 284
Future Trends ......................................................................... 287
Conclusion ................................................................................ 288
Bibliography .............................................................................. 288
### Part IV: IT Development and Management

#### Chapter VII. IT Development

- **Introduction** ................................................. 290
- **IT Centers** .................................................. 290
- **IT Development Center** .................................... 290
  - EII Development Methodologies .......................... 291
  - EII Development Strategies .............................. 292
- **Strategic Use of IT** ........................................ 294
- **Development of Subroutine, Object and Component** .... 297
- **Middleware-Driven Interfacing** ......................... 298
- **EAI-Enterprise Applications Integration** ............... 300
- **Workflow-Driven Integration** ............................ 302
- **Legacy Systems Integration** ............................ 303
- **BPR-Business Process Reengineering** .................. 304
- **BPI-Business Process Integration** ....................... 308
- **B2B Integration** ........................................... 310
- **E-Market Integration** ...................................... 310
- **Mobile Integration** ......................................... 311
- **IT Developmental Vision for the 21st Century** ....... 312
- **Beyond COBOL – IT Skills for the 21st Century** ....... 314
- **Computer Controversies** .................................. 316
- **Conclusion** .................................................. 319
- **Bibliography** ................................................ 319

#### Chapter VIII. IT Management

- **Introduction** ................................................. 321
- **IT as a New Business Function** ........................... 321
- **IT Management Key Indicators** .......................... 324
- **IT Management Levels** ..................................... 326
- **IT Management Trends** ..................................... 335
- **Business and IT Strategies Integration** ................. 337
  - **Business Aims** ............................................ 337
- **Business Aims** .............................................. 339
  - **IT Aims** .................................................... 342
  - **IT Mission** ................................................ 343
  - **IT Creed** .................................................. 344
  - **IT Culture** ................................................ 344
  - **IT Paradigms** .............................................. 346
  - **IT Goals** ................................................... 347
  - **IT Strategy** ................................................ 348
  - **IT Targets** ................................................ 349
  - **Application Strategic Domain** .......................... 349
  - **IT Differential Advantage** .............................. 350
The purpose of this book is to provide big-picture strategies and system architectures which evolve an enterprise. The synthesis of about 300 IT technologies is presented in a consistent manner under the form of graphic modeling. To analyze each of these technologies one must read about 300 books, which is a tough task. However, if we look at the library shelves, such an amount of different books on IT applications in an enterprise exists, if not more.

Therefore the book is recommended for those readers who are interested mainly in general solutions of IT in the enterprise. Among such readers one can include:

- Business executives
- Information executives
- IS/CIS/MIS major students of the cup-stone curriculum courses
- MBA students who take a course on IT management
- IT technicians who would like to understand how their specific solutions fit into a bigger-picture solution

The book concept is presented in the following model.

Chapter 1 analyzes paradigm shifts in enterprise management caused by the applications of information technologies (IT). As a result of it, a new set of business rules is defined.

Chapter 2 defines eight evolutionary enterprise configurations triggered by the implementation of advanced applications of IT. This is a very important approach in understanding how to manage the development of IT applications to achieve the right end-solution at a given time.

Chapter 3 portrays five layers of the Enterprise Information Infrastructure (EII), which evolves from islands of automation. To manage a modern enterprise it is necessary to understand how to develop and manage EII, which is composed of hundreds information technologies.
Chapter 4 defines architectures of major application systems within the framework of the enterprise-wide solutions. These architectures identify endless number of components and their relationships, which control the flow of information ("content") in decision-making processes of an enterprise.

Chapter 5 describes major solutions that determine so called enterprise electronization and integration. Several emerging standards which support these processes are presented. Also their relationships are provided under the form of a web’s services.

Chapter 6 defines the Internet Ecosystem in terms of its layers and major applications in business. The “dot.com” issue is analyzed and its impact upon the future of the Internet.

Chapter 7 present the major trends in developing IT solutions, among them such ones as design strategies and methodologies and 10 specific developmental approaches. Some future trends of IT developments are sketched.

Chapter 8 depicts issues and solutions on how to manage an IT-driven enterprise. The fundamental rule is to integrate business and system strategies and choose the right strategic applications. A set of management key indicators, based upon a balance scorecard, how to manage such enterprise is provided.

The author is very grateful to anonymous reviewers who provided very important suggestions on how to improve this book.

Andrew S. Targowski
The Book Architecture

- Enterprise Evolution - Chapter 2
- Business Architecture - Chapter 1
- Applications - Chapter 4
- Enterprise Information Infrastructure - Chapter 3
- Electronization & Integration - Chapter 5
- Internet Ecosystem - Chapter 6
- IT Development - Chapter 7
- IT Management - Chapter 8
